

# Don't Let Budget Cuts Affect Your Network Security

Learn How Avenda Systems Can Save You Time and Money

Today's schools are a dynamic environment filled with e-learning programs, computer labs, Internet, and wireless access. In addition, many schools routinely host student and parent focused events that require Internet connectivity. School districts are being recognized as leaders for providing wireless LAN (WLAN) access, adding SMART Boards to the network, and for letting students use personal laptops instead of district owned computers. Secure your network and reputation.

Avenda Systems provides a proven solution for K-12 environments:

- One appliance for district-wide login access security
- Easy to provision Internet access (during school and after hours)
- Keep computers free from virus and malware threats
- Role-based user privileges - define what students, teachers, staff and visitors can access when on your campus network
- Support any mix of network device and active directory vendors
- Widest support of laptops, smartphones, and desktops (district and user owned)

**Special K-12 pricing (program expires 12/31/2009)**
